

Professional big bag recycling

Professional big bag recycling means that big bags are recycled within a circular economy so that the raw material can be reused for other purposes.

Simply disposing of big bags in waste incineration plants is also an option, as no toxic substances remain after incineration. However, this means that the recyclable materials are destroyed and cannot be reused a second time.

This is why the proper recycling of big bags is so important today!

The following will be accepted:

-  White big bags (no coloured bags)
-  White or coloured loops
-  Printed or unprinted
-  Bags must be completely empty

Delivery must be agreed and coordinated with InnoRecycling in advance. The big bags must be delivered free of charge to the Eschlikon depot. The daily price for disposal will be announced by InnoRecycling at the time of registration and will be charged or credited directly, as applicable.
